

Minimum Off Route Altitude (MORA)

There are 2 types of MORA

- Route MORA
- Grid MORA

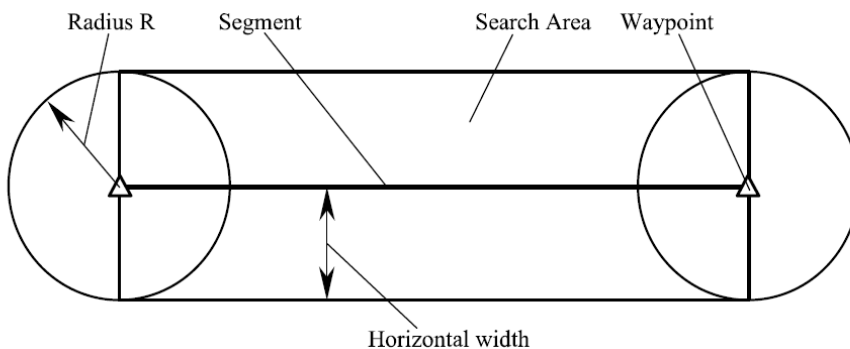

Lido methodology uses Route MORA

Description of Route MORA:

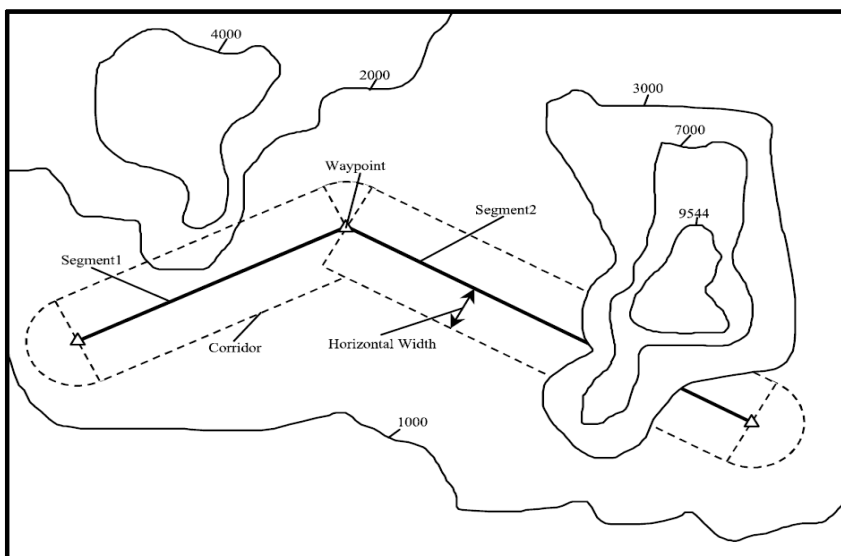

Minimum off route altitude values clear all terrain by 1000 ft in areas where the highest terrain elevation is up to 5000 ft. A clearance of 2000 ft is provided above all terrain which is 5001 ft and above.

Route MORA provides an obstacle clearance within 10 NM either side of the route centerline and within a 10 NM radius around the ends of the airways or segments

Definition of the search corridor for a segment in the case of MORA
